REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Regarding claims 1, and 9, the prior arts fail to teach or fairly suggest a time-division multiplex radio communication method, wherein a transmitter transmits radio signal bursts destined for at least one receiver in time slots allocated to a channel on a carrier frequency, wherein the radio signal of each burst is formed from a block of digital symbols including training symbols provided for an estimation of demodulation parameters by the receiver and information symbols to be estimated by the receiver by a demodulation using the estimated parameters, wherein the training symbols comprise a first sequence of symbols placed at the start of the block from which each radio signal burst is formed and a second sequence of symbols placed at the end of said block, wherein each radio signal burst comprises an initial portion in which the radio signal rises in power up to a range of transmission power, a central portion in which the radio signal is transmitted within said power range and a final portion in which the radio signal decreases in power from said power range, wherein at least one of the first and second sequences of training symbols gives rise to a modulation of the radio signal of the burst outside the central portion, in combination with other limitations as specified in the independent claims 1 and 9.
